Protection for touchscreen

The waterproof touch-screen enclosure is designed to reliably protect interfaces in the most demanding industrial settings. Available as a flush-mounted model or with a curtain front, it provides outstanding protection against water, dust, impacts and the wear-and-tear associated with use in industrial or food-processing environments.

It allows a touch screen to be neatly integrated while ensuring maximum user comfort and impeccable hygiene.

DESCRIPTION:

- Material: 10 mm white PVC
- Use: environments exposed to water spray
- Compatibility: IP66 touchscreens
- Mounting: vertical installation
- Front cut-out: designed for flush-mounting a touchscreen

BENEFITS:

- Effective protection against water, dust and industrial wear
- Smooth surfaces for easy cleaning
- Compatible with a wide range of touchscreens
- Bespoke manufacturing available
- Built for demanding environments (food processing, production, laboratories, workshops...)

OPTIONS

Deflector

Deflector designed to prevent water ingress and run-off.

KDL

No-cut cable grommet for neat cable routing without altering the furniture.

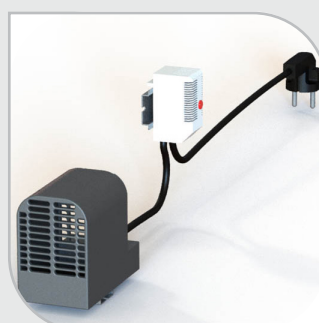

Curtain version

Set-up with an integrated curtain.

Mounting brackets

Fixing accessories for installation.

RCA 50W

RCA thermostatically controlled resistive heater, designed to maintain a stable, even temperature.
