

Safe equipment. Smart mobility.

LMREA

Designer & Manufacturer

The flap access hatch (TAV) is a smart option, designed to provide direct, secure access to documents while integrating seamlessly with your LMREA protective enclosure. Developed specifically for installations using industrial printers, it makes it easy to retrieve labels, delivery notes or production sheets, while maintaining the integrity, cleanliness and safety of the equipment protected inside the enclosure.

DESCRIPTION:

To meet every level of requirement, the flap access hatch is available in three mounting versions:

- **Standard Version:** Surface-mounted fixing for quick, straightforward access. Ideal for standard environments.
- **Sealed Version:** Designed for demanding industrial settings, its surface-mounted fixing with an airtight closure provides enhanced protection against dust and moisture.
- **Recessed Version:** Delivers a watertight, seamlessly integrated finish (flush with the wall), ideal for large opaque panels where appearance is paramount.

BENEFITS:

- **Convenient, instant access:** Collect your printed documents without opening the main enclosure, streamlining your workflow and boosting productivity.
- **Ongoing protection for your equipment:** By keeping the enclosure closed, the hatch helps protect the printer and other components from dust, moisture and other environmental stresses.
- **Flexible installation:** Available in several versions (surface-mounted or recessed), the hatch suits different enclosure types and a range of wall thicknesses.
