

Floor stand brackets

A stable and durable support for your equipment

This floor stand is specifically designed to provide ergonomic and stable support for our range of cabinets and enclosures. By raising your equipment, it positions them at a comfortable working height, reducing fatigue and improving operator efficiency.

Its main structure is made of 304L stainless-steel tubing with a 30×30 mm profile, a material known for its high corrosion resistance and durability. This makes it an ideal floor-mounted support solution, even in the most demanding industrial environments. For applications requiring enhanced protection, particularly in saline or chemical settings, a 316L stainless-steel version is available on request.

Safety and installation

Safety is our priority. That's why this floor stand is equipped with two robust mounting brackets. These allow the stand to be securely anchored to the floor, ensuring impeccable stability and preventing any risk of tipping when handling equipment.

Combining strength, modularity, and comfort, this stainless-steel floor stand is the perfect support solution to enhance your cabinets and enclosures while improving the ergonomics of your workspace.

Options and variants

Because every installation is unique, we offer several options to adapt this floor stand to your specific needs:

- **Custom dimensions:** Adjusting height and width according to your equipment or installation environment.
- **Improved mobility:** Addition of durable casters (with or without brake) for easy equipment movement.
- **Protection and aesthetics:** Optional cladding to protect cables and provide a cleaner finish.
- **Enhanced functionality:** Integration of a shelf or lower tray to keep tools or documents within easy reach.
